Options:

- 'F' - One mounting beam countersunk
- 'FF' - Both beams countersunk
- 'SA' - Stainless 316L end bolts & retaining pins
(Subject to manufacturing MOQ: 50 pieces)
- '120' - 120% over-extension of standard slide

Bespoke length, drilling pattern & extension on request

If mounting on the indirect axis, flat, as in the image above, reduce the load capacity by 60-80% and allow for increased deflection, or contact our engineers to request accurate FEA load analysis for OEM projects. We load rate per fully extended pair of slides on the direct axis, upright, with uniform loading across the beams. If load capacities need to be increased, please contact us for technical advice.

Material:

Beams: EN-AW 6082 T6, anodised acc. 8S1615 M10

Ball bearings: Stainless steel AISI-316L (1.4404)

Ball cages: Stainless steel sheet 316L (1.4404). Laser cut for accuracy

End bolts & stopping pins: Stainless steel A2 304 (1.4301)

Surface protection: Anodised to BS 1615 AA10 (max length 1100mm). Lengths 1150mm+ supplied raw, non-anodised.

Temperature range: We recommend -40 to +200° C with low/high-temp lubrication and free movement to allow for expansion.

Lubrication: We apply and recommend lithium based EP3 grease for general applications. High & low temp grease upon request

Thread pitches: As per end profile image - coarse

Do not dismantle the slide!

The maximum safe working load is stated for a fully extended pair of slides, mounted upright.

Use all fixing holes and spread the load evenly across the inner beam.

Flat mounting: Reduce the load by 60-80%.

We recommend the use of strong L brackets for under or floor mount.

Deflection is calculated at approx 1% of the closed length, at or near full load capacity.
