Professional Range - **Stainless Steel**

Super Extension Telescopic Slide

Type: SDDTS-70

Version: 2021/1

SDDTS-70

SLIDING
SYSTEMS

If mounting on the indirect axis, flat, as in the image above, reduce the load capacity by 60-80% and allow for increased deflection, or contact our engineers to request accurate FEA load analysis for OEM projects. We load rate per fully extended pair of slides on the direct axis, upright, with uniform loading across the beams. If load capacities need to be increased, please contact us for technical advice.

Material: All stainless steel parts

Beams: Stainless 316L (1.4404) cold drawn & precision milled

Ball bearings: Stainless 316L (1.4404)

Ball cages: Stainless 430 Ferritic (1.4016)

End bolts: Stainless A2 304 (1.4301)

Surface treatment: Polished

Temperature range: Cryogenic to $\approx 800^{\circ}$ C with suitable lubrication & material yield strength reduction

Lubrication: We apply and recommend lithium based EP3 grease for general applications. High & low temp grease upon request

Thread pitches: As per end profile image - coarse

Options:

'F' - One mounting beam countersunk

'FF' - Both beams countersunk

'V' - V shaped raceways (bi-directional slides)

Bespoke length, drilling pattern & extension on request

Do not dismantle the slide!

The maximum safe working load is stated for a fully extended pair of slides, mounted upright.

Use all fixing holes and spread the load evenly across the inner beam.

Flat mounting: Reduce the load by 60-80%.

We recommend the use of strong L brackets for under or floor mount.

Deflection is calculated at approx 1% of the closed length, at or near full load capacity.
